Terra Call

Emergency Caregiver Monitoring — Complete Feature Summary (July 2026)

Logging In & Accounts

- **Sign up / sign in** with email and password (Firebase Authentication).
- During registration you pick a role: **Care Recipient**, **Caregiver**, or **Family Member**.
- **Admin access:** admin is not a role you can pick at signup. The account **mike@terra-call.com** is automatically given the admin role when it signs in. To use the admin dashboard, log in with that email and its password.
- Once inside, an admin can promote or change any other user's role from the **Users** tab of the admin dashboard.

Care Recipient Features

- **“I'M OK” check-in button** — one big tap to record they're safe; recent check-in history shown below.
- **“I'M NOT OK” emergency button** — instantly alerts all linked caregivers (push notification, and SMS if the recipient consented).
- **Call My Caregiver** — starts a video call to their caregiver, with a real in-app ringtone on the caregiver's side.
- **Emergency options** — quick access to call 911 or their caregiver directly.
- **Home camera settings** — optionally connect a Reolink home camera (credentials stored encrypted).
- **Location privacy** — location is captured only at check-in or emergency, never continuously tracked.
- **Missed check-in reminders** — local reminders on their device, with configurable time windows.

Caregiver Features

- **Live status dashboard** — all linked recipients at a glance: Safe, Missed, or Emergency, updated in real time.
- **Alert feed** — recent alerts (missed check-ins, emergencies) with a per-caregiver “clear” that doesn't affect other caregivers.
- **Automatic emergency camera** — when a recipient triggers an emergency, a full-screen modal pops up on the caregiver's phone with the home camera feed, or a clean prompt to start a phone video call if no home camera is set up.
- **Two-way video calls** — call a recipient's phone camera; during emergencies the screen splits to show both the phone camera and the home camera feeds.
- **Map view** — recipient locations from their last check-in or emergency (with a list fallback where maps aren't available).
- **Invite system** — link new care recipients via invite codes (sent by email/SMS).

- **Push + SMS alerts** — notified when a recipient misses their check-in window or escalates to an emergency; SMS is gated by the recipient's consent (HIPAA).

Admin Dashboard

Log in as **mike@terra-call.com** to access the admin dashboard.

- **Overview tab** — user metrics (totals, active, signups), activity stats (check-ins, emergencies), and system health (API, Firebase, Twilio delivery rates).
- **Users tab** — search and filter all users, change roles, link users to organizations, and track HIPAA consent status.
- **Organizations tab** — B2B account management for home health agencies and Medicaid providers, including subscription tier and status.
- **Care Reports tab** — generate care activity reports for a user and date range; export as CSV or PDF.
- **Audit Log tab** — append-only, HIPAA-compliant trail of logins, check-ins, data access, and admin edits.

Under the Hood

- Firebase Auth + Firestore for real-time data; Twilio for video calls and SMS; an Express API server for tokens, notifications, and the camera proxy.
- PHI hygiene throughout: no recipient names in push notification text, encrypted camera credentials, names in SMS only with consent.
- Ships as a native Android/iOS build with over-the-air updates for JavaScript-only changes.
